气囊电缆

气囊电缆革新 THE AIR BAG REVOLUTION

普睿司曼设计并拥有专利的新系统，它能提供额外的保护，保留了非铠装电缆的功能优势，甚至优于传统的铠装电缆。**气囊电缆**是一个全新的设计，可以由其自身的变形吸收运动所产生的能量。这样不会有剩余的残余能量损伤电缆的“敏感”结构，如绝缘、屏蔽。金属铠装不会如此充分，冲击的部分能量会传递到电缆的内层，潜在地损伤绝缘的完整性。

气囊电缆的保护性能和可靠性在本质上得到了改进。另外，此电缆与传统的铠装电缆相比较，重量更轻，而且更加灵活与易于安装。

气囊电缆在可靠性和重量减轻等方面的优势，使它广泛的应用于民宅、建筑、工业和公共设施。

Prysmian has designed and patented a revolutionary solution that provides better mechanical protection than traditional metal armoured cable maintaining the functional advantages of unarmoured cables. **AIR BAG™** is a radically new design that absorbs the kinetic energy of a shock by its deformation. In this way no residual energy is left to damage the "sensitive" parts of the cable such as insulation and screens. Metal armoring doesn't behave so efficiently: part of the energy of a shock is transmitted to the inner layers of the cable, potentially prejudicing the insulation's integrity.

The level of protection achieved with **AIR BAG™** and, by consequence, the reliability is substantially improved. Additionally, the cable is much lighter, flexible and easy to install than a traditional armoured cable.

Thanks to **AIR BAG™** versatility the range of applications is wide and covers residential, infrastructures, industry and utilities, always giving the same benefits in terms of reliability and weight reduction.

防护免受机械损伤 PROTECTION AGAINST MECHANICAL DAMAGE

电缆会在许多不同情况下受到损伤，事实上在所有的生产环境中。

机械滥用经常会损伤电缆绝缘以及保护屏蔽，而导致过早的和不可预期的事故，降低了长期可靠性。由此造成的经济损失和服务的中断是很容易统计的。

制造商通常使用金属铠装（钢带、钢丝等）保护电缆，或者安装在管道内。

这些解决方法都增加了额外的费用和安装时间，特别是传统的金属铠装电缆和重量、灵活性、连接安装等方面与标准的非铠装电缆相比有很大的劣势。

Cables can be damaged in many different circumstances and in virtually all operative environments.

Mechanical abuse can often damage cable insulation and protective screens, leading to a premature and unexpected failure and, in any case, to a dramatic decrease of long term reliability. The economic consequences of this and the disruptive effects on service continuity are easy to quantify.

Industry's response has been traditionally to protect cables with metal armoring (applied in tapes, wires, etc) or to install them with additional external protection such as covered trays, pipes etc. Both solutions involve significant additional costs and longer installation time. In particular the traditional metal armoured cables show a significant

disadvantage in terms of weight, flexibility, difficult jointing compared to a standard unarmoured cable.

设计 DESIGN

气囊电缆提供了一种机械防护，可以广泛用于多芯和单芯电缆。按照不同的要求可以设计不同的结构。聚合材料的共挤层如同一个系统一样工作，能够对冲击提供非常有效的防护。

The **AIR BAG™** system is a mechanical protection that can be applied to multicore and single core cables. Depending on specific applications different architectures are possible. The polymeric extruded layers work together as a system and provide a very effective defence against impact.

金属铠装 METAL ARMoured

金属铠装具有很高的模数，即使冲击能量造成很小的变形，也会给电缆内层传递高危险的特种压力。

Metal armour has a much higher Modulus, thus impact energy is dissipated with a lower deformation (L) and a high dangerous specific force is transmitted to inner layers of the cable.
